STREAMLINED VIRTUALIZATION

Dell's PowerEdge 1950 III offers outstanding virtualization performance in a 2-socket 1U server combined with optional, factory integrated virtualization capabilities. Dell continues to simplify virtualization by streamlining virtualization deployment and providing ease of use in virtual infrastructures. By factory integrating VMware® ESXi 3.5, customers receive VMware capabilities and migration of virtual machines within a few clicks of a mouse.

CHOOSE SERVICES, SOLUTIONS, AND SPECIFICATIONS

To customize your server today, talk to your account manager or visit dell.com. For example, you have the freedom to choose either two high-performance 2.5" or two low-cost 3.5" hard drives depending on what you've decided to standardize on. Then choose from the industry's widest variety of complementary hardware, software, and external storage solutions.

Customers concerned with space are often also concerned with energy consumption. In many regions of the world, we offer a suite of services to help you optimize the design of your data center. Regardless of whether you choose our services, you can trust that each server will be fully assembled and tested before we ship it directly to you.

RELY ON DELL FOR THE LATEST PROVEN TECHNOLOGIES

To help conserve energy, which is good for your budget as well as the planet, Dell was the first Tier 1 server vendor to offer a line of power-optimized servers, including the best-selling PowerEdge™ Energy Smart 1950. Now we are beginning to migrate components from these servers into our mainstream servers. We also have introduced real-time power monitoring in the server (not the PDU) based on the PMbus industry standard.

As reliance on computerized information has grown, so have threats related to its security. The latest PowerEdge servers are Dell's most secure servers yet. To protect the confidentiality, integrity, and availability of data, Dell has included a variety of features, such as a Trusted Platform Module (TPM), more features within the lockable chassis, and new RAID controller cards that protect against the failure of two drives.

We offer the latest proven technology, such as a pair of quad-core Intel® Xeon® processors and a variety of network interface options. Together, these components are designed to dramatically boost performance.

Dell knows that the management of technology often costs more than the technology itself. So we've worked to include many features to simplify the task. Whether you want to work locally using USB flash drives or remotely via Wake-on-LAN or iSCSI boot, these servers offer greatly improved flexibility. Finally, the PowerEdge Behavioral Specification simplifies management by enforcing consistency in user interaction and hardware layout.
